EXTERIORS · SAINT GEORGE, UTAH

Lot Vision Kit

For listing agents, lot owners and developers selling vacant land

EVOLVE EXTERIORS

Sell the lot by showing what it becomes.

Buyers struggle to picture a home on raw desert ground. We survey the lot by drone and deliver a concept rendering and flyover video that let buyers see the finished home, its views and its yard before they ever walk the site.

WHAT YOU GET

- **Drone survey of the lot.** High-resolution aerial photo map plus topographic contours showing slope, grade and lot lines.
- **Concept rendering, two views.** A photoreal exterior concept of a home and landscape sited on the actual lot, designed to fit the community's style.
- **45-second flyover video.** Aerial footage that moves from today's raw lot, dissolves into the finished concept, and closes on a hero orbit, sized for MLS, Instagram and Reels.
- **Listing-ready image set, four sizes.** MLS, square social, 9:16 story, and a before/after pair, delivered in one download link.

FOUNDING-CLIENT PRICE

$950

per lot · first three clients

Covers one residential lot, one drone flight and one round of revisions to the rendering.

DEVELOPER BUNDLE

3 lots for $2,400

HOW IT WORKS

1 Book.

Send the lot address and any HOA guidelines.

2 Fly.

We capture the site in a single drone flight.

3 Design.

We build the concept on the real survey data.

4 Deliver.

Rendering, video and image set, typically 7–10 business days after the flight.

Built by the team that designs and builds at Black Desert Resort. Evolve surveys, grades, landscapes and builds, so every concept reflects what can actually be built on that lot.

Concept renderings are illustrative marketing visuals, not engineered, surveyed-to-standard or HOA-approved designs. Drone flights are weather-dependent and conducted under FAA Part 107 rules.

Site Survey & Grading Plan

For landscapers, pool & hardscape contractors and custom home builders

EVOLVE EXTERIORS

Start every project on accurate ground.

Design review and good drainage both depend on knowing the real grades on the lot. We fly the site, build an existing-conditions sheet from the survey data and draw the grading and drainage plan your design and your crew will work from.

WHAT YOU GET

- **Drone topographic survey.** High-resolution aerial map with contours, spot elevations and site features captured in a single flight.
- **Existing-conditions sheet.** The base sheet every other drawing is built on: topography, lot lines, setbacks and natural features.
- **Grading & drainage plan.** Pad elevations, spot grades and drainage flow drawn to the survey data.
- **Design-review checklist pass.** Grading items checked against the HOA or DRC checklist before you submit.
- **Revisions & model export.** One round of revisions from review comments, plus DXF / SketchUp files for your crew.

PROJECT PRICE

$3,000

per residential lot

Paid in full at signing. Multi-lot and larger sites are quoted separately.

HOW IT WORKS

1 Scope.
Share the architect site plan, lot details and design intent.

2 Fly.
We survey the lot and build the existing-conditions sheet.

3 Draft.
Grading and drainage plan, checked against the review list.

4 Submit.
You submit; we turn one round of review comments.

Need landscape plans too? Planting, hardscape and lighting design is built directly on this survey and grading plan. Ask us to quote the full landscape package.

Grading plans are design documents, not stamped engineering. Where a city, county or HOA requires drawings stamped by a licensed engineer or land surveyor, that stamp is provided by others. Approval decisions rest with the reviewing body. Drone flights are weather-dependent and conducted under FAA Part 107 rules.
